

Oakland, CA | October 22, 2024 | \$35

Purpose & Background:

This workshop provides an overview of best practices for ground improvement in California, focusing on Geopier® systems, Rammed Aggregate Piers (RAPs), and seismic design. In seismic regions, liquefaction risk is a significant concern, and this workshop will explore how these methods improve load-bearing capacity, enhance soil stability, and ensure safety. Participants will gain insights into both static and seismic performance through real-world case studies, equipping engineers and project managers with the tools to address the unique challenges of California's construction projects.

Topics Include:

- Comprehensive discussions of static and seismic design requirements for Geopier® ground improvement solutions, focusing on installation methods, quality control, and load testing considerations.
- Effective techniques for mitigating liquefaction risks, including exploration of seismic hazard assessments, triggering methods, and performance-based settlement approaches.
- In-depth case studies, such as 3D dynamic modeling for liquefaction mitigation, and examples of Geopier® applications in both local and international seismic regions, emphasizing both static and dynamic conditions.

Learning Outcomes:

Participants will understand the static and seismic design principles for Geopier® systems, including installation and quality control processes. They will gain knowledge on effective liquefaction mitigation techniques, seismic hazard assessments, and performance-based settlement methods. Attendees will also learn from real-world case studies to effectively implement these solutions in seismic and liquefaction-prone areas.

Registration:

Seating is limited to approximately 30 participants, with registrations taken in the order they are received. Coffee, beverages, and lunch will be provided. Please inform us in advance of any dietary restrictions so we can accommodate them. Please bring a laptop with internet access to connect to Geopier+. After registering, you will receive an email confirmation with additional details on how to access Geopier +.

Cost: \$35

Location:

Lake Chalet
1520 Lakeside Drive on Lake Merritt
Oakland, CA 94612
(510) 208 5253

SPEAKERS

Dimitrios Zekkos, PhD
Professor of Civil & Environmental
Engineering
University of California,
Berkeley

Abigale Heckscher, PE
Region Engineer
Geopier, A Division of CMC

**Kord Wissmann, PhD, PE,
BC.GE**
President
Geopier, A Division of CMC

Yogesh Prashar, PE, GE
Area Manager - West
Geopier, A Division of CMC

Roy Doumet, PE
Region Engineer
Geopier, A Division of CMC

Oakland, CA | October 22, 2024 | \$35

TIME	TOPIC	SPEAKER
9:30 am	Check-In	
10:30 am	Introductions	Abigale Heckscher
10:45 am	Discussion & Technology Overview	Abigale Heckscher & Roy Doumet
11:00 am	Geopier® Static Design	Abigale Heckscher & Roy Doumet
11:45 am	SRT: Slope Stability System Overview	Yogesh Prashar
12:00 pm	Lunch	
1:00 pm	How Geopier® Systems Mitigate Liquefaction	Dr. Kord Wissmann
2:00 pm	Seismic Design & Liquefaction	Yogesh Prashar
2:30 pm	Case Study: Dynamic Non-Linear Analysis for Large Diameter Tank	Dr. Dimitrios Zekkos
3:15 pm	15 min break	
3:30 pm	West Coast Case Studies	Abigale Heckscher & Roy Doumet
3:45 pm	Discussion & Closing	Abigale Heckscher
4:00 pm	Networking/Happy Hour	

Attendees will receive 5 PDH credits.
