## THE RIGHT DESIGN

“For engineering and construction professionals looking to easily compare several design alternatives, Tensar offers SpectraPave Online. The concept product takes everything into consideration including lifecycle cost, time savings, and sustainability. Congratulations *Constructech* Top Products 2021 winner.”

—Peggy Smedley

### SpectraPave ONLINE

Newly launched, concept product, SpectraPave Online is a free, cloud-based software for engineers, contractors, and owners to design with geogrid in a variety of applications such as pavement construction, soil stabilization, and other site development challenges. The technology, which has undergone a comprehensive third-party review by pavement engineering experts, calculates the total value of the solution and compares it to conventional construction alternatives. Here is what makes it unique: Value is based on not only performance vs initial construction cost, but also lifecycle cost, time savings, and sustainability. SpectraPave Online provides specification generation, along with educational resources to help users make informed decisions. As a concept product, the initial software launch is focused on evaluating pavement and gravel sections across a variety of subgrade conditions. The technology also incorporates the benefits of Tensar geogrids into design methodologies. [www.tensarapp.com](http://www.tensarapp.com)
