

PROJECT

Petrochemical Crane Project
Lake Charles, LA | July 2017

PROJECT DETAILS

The crane bearing pad was installed on time and on budget in spite of numerous construction delays due to the heavy seasonal rains. Unlike the concrete option, the crushed stone can be easily removed and reused at other site locations. **This resulted in a cost saving of at least \$2.3 million. Plus, \$815,000 savings in crane rental for a total savings of \$3.11 million.**

- Crane was rated as the 3rd largest in the world
- Crane pad withstood Hurricane Harvey without damage; drainage system allowed crane to start making lifts the day after the storm passed

Product

TriAx TX160
50,000 square yards

Performance Improvement

Project was completed 32 days early, providing further saving in crane rental fees

TOTAL SAVINGS

\$3.11 million
