Installation: November 2020  
Product: InterAx geogrid

Tensor InterAx geogrid  
delivers long-term solution  
for new laydown yard

### CLIENT'S CHALLENGE

RB Construction was building a laydown yard for their equipment and the site consisted of soft, wet soils. DCP testing performed during construction indicated subgrade CBR values as low as 1%.

### TENSAR SOLUTION

This installation crew had never worked with geogrid prior to this project. The InterAx geogrid went in smoothly with no issues. After compacting 12" of granular import, the resulting surface was firm and unyielding. The owner was pleased with the results and anticipates their new laydown area will exceed their expectations.

*The project referenced herein was a demonstration project. The geogrid materials involved were provided under a confidentiality agreement and were not commercial sales.*
