

## Pavement Performance Relies on What's Below

**IMAGINE** the above pavement is the entry to a shopping center, hospital, school, warehouse, factory or any type of site with a primary entry. During construction, the contractor places an aggregate layer along the alignment of that entry to use as a haul road. Once the buildings are constructed and site work is completed, which subgrade condition shown below from the box test would you want to support your pavement?

**The choice is yours.**
