

Pavement Patch

Installation Instructions for Rapid Repair™ GG100 and GP25

The Rapid Repair™ System is a complete repair system for the reinforcement of jointed superstructures, single cracks, and small localized areas. The GG100 and GP25 pavement patches are made up of a fiberglass reinforcement bonded to a polymer modified layer of asphalt. The GG100/GP25 pavement patches are specifically designed for the manual repair of small areas and can be installed directly on milled surfaces after the application of a manufacturer's approved tack coat.

The Rapid Repair GG100 and GP25 pavement patches slow and reduce reflective cracks by turning crack stresses horizontally to dissipate stress. The pavement patches are also used for covering trenches, base repair patches, and lane widening.

FEATURES AND BENEFITS

- ▶ Self-adhesive polymer modified bitumen layer
- ▶ Ultrathin, so no bumps
- ▶ Fast and easy manual installation
- ▶ Slows and reduces long-term cracking
- ▶ Increases pavement life
- ▶ Lowers maintenance costs
- ▶ Fully millable and recyclable
- ▶ Moisture barrier

FOUR EASY STEPS FOR INSTALLATION

- ▶ Ensure surface is properly prepared, clean, dry and dust-free
- ▶ Use a tack coat or primer on heavily oxidized areas, milled surfaces, and on concrete surfaces
- ▶ Lay pavement patch over area of repair and roll over it with a rubber tire to adhere the patch to the surface
- ▶ Cover with a minimum of 1.5 in. (4 cm) of hot mix asphalt
